### Definition SLE System of Linear Equations

A system of linear equations is a collection of m equations in the variable quantities  $x_1, x_2, x_3, \ldots, x_n$  of the form,

$$a_{11}x_1 + a_{12}x_2 + a_{13}x_3 + \dots + a_{1n}x_n = b_1$$
  

$$a_{21}x_1 + a_{22}x_2 + a_{23}x_3 + \dots + a_{2n}x_n = b_2$$
  

$$a_{31}x_1 + a_{32}x_2 + a_{33}x_3 + \dots + a_{3n}x_n = b_3$$
  

$$\vdots$$
  

$$a_{m1}x_1 + a_{m2}x_2 + a_{m3}x_3 + \dots + a_{mn}x_n = b_m$$

where the values of  $a_{ij}$ ,  $b_i$  and  $x_j$  are from the set of complex numbers,  $\mathbb{C}$ .

## Definition ESYS Equivalent Systems

Two systems of linear equations are **equivalent** if their solution sets are equal.

1

 $\mathbf{2}$ 

 $\textcircled{C}2005,\,2006$   $\,$  Robert A. Beezer

## Definition EO Equation Operations

Given a system of linear equations, the following three operations will transform the system into a different one, and each is known as an **equation operation**.

- 1. Swap the locations of two equations in the list.
- 2. Multiply each term of an equation by a nonzero quantity.
- 3. Multiply each term of one equation by some quantity, and add these terms to a second equation, on both sides of the equality. Leave the first equation the same after this operation, but replace the second equation by the new one.

©2005, 2006 Robert A. Beezer

## Theorem EOPSS Equation Operations Preserve Solution Sets

If we apply one of the three equation operations of Definition EO to a system of linear equations (Definition SLE), then the original system and the transformed system are equivalent.

©2005, 2006 Robert A. Beezer

#### Definition M Matrix

An  $m \times n$  matrix is a rectangular layout of numbers from  $\mathbb{C}$  having m rows and n columns. We will use upper-case Latin letters from the start of the alphabet (A, B, C, ...) to denote matrices and squared-off brackets to delimit the layout. Many use large parentheses instead of brackets — the distinction is not important. Rows of a matrix will be referenced starting at the top and working down (i.e. row 1 is at the top) and columns will be referenced starting from the left (i.e. column 1 is at the left). For a matrix A, the notation  $[A]_{ij}$  will refer to the complex number in row i and column j of A.

©2005, 2006 Robert A. Beezer

#### Definition CV Column Vector

A column vector of size m is an ordered list of m numbers, which is written in order vertically, starting at the top and proceeding to the bottom. At times, we will refer to a column vector as simply a vector. Column vectors will be written in bold, usually with lower case Latin letter from the end of the alphabet such as  $\mathbf{u}, \mathbf{v}, \mathbf{w}, \mathbf{x}, \mathbf{y}, \mathbf{z}$ . Some books like to write vectors with arrows, such as  $\vec{u}$ . Writing by hand, some like to put arrows on top of the symbol, or a tilde underneath the symbol, as in u. To refer to the entry or component that is number i in the list that is the vector  $\mathbf{v}$  we write  $[\mathbf{v}]_i$ .

©2005, 2006 Robert A. Beezer

#### Definition ZV Zero Vector

The **zero vector** of size m is the column vector of size m where each entry is the number zero,

$$\mathbf{0} = \begin{bmatrix} 0\\0\\0\\\vdots\\0 \end{bmatrix}$$

or more compactly,  $[\mathbf{0}]_i = 0$  for  $1 \le i \le m$ .

©2005, 2006 Robert A. Beezer

## Definition CM Coefficient Matrix

For a system of linear equations,

 $a_{11}x_1 + a_{12}x_2 + a_{13}x_3 + \dots + a_{1n}x_n = b_1$   $a_{21}x_1 + a_{22}x_2 + a_{23}x_3 + \dots + a_{2n}x_n = b_2$   $a_{31}x_1 + a_{32}x_2 + a_{33}x_3 + \dots + a_{3n}x_n = b_3$   $\vdots$  $a_{m1}x_1 + a_{m2}x_2 + a_{m3}x_3 + \dots + a_{mn}x_n = b_m$ 

the **coefficient matrix** is the  $m \times n$  matrix

 $A = \begin{bmatrix} a_{11} & a_{12} & a_{13} & \dots & a_{1n} \\ a_{21} & a_{22} & a_{23} & \dots & a_{2n} \\ a_{31} & a_{32} & a_{33} & \dots & a_{3n} \\ \vdots & & & & \\ a_{m1} & a_{m2} & a_{m3} & \dots & a_{mn} \end{bmatrix}$ 

 $\textcircled{C}2005,\,2006$   $\,$  Robert A. Beezer

#### Definition VOC Vector of Constants

For a system of linear equations,

$$a_{11}x_1 + a_{12}x_2 + a_{13}x_3 + \dots + a_{1n}x_n = b_1$$
  

$$a_{21}x_1 + a_{22}x_2 + a_{23}x_3 + \dots + a_{2n}x_n = b_2$$
  

$$a_{31}x_1 + a_{32}x_2 + a_{33}x_3 + \dots + a_{3n}x_n = b_3$$
  

$$\vdots$$

 $a_{m1}x_1 + a_{m2}x_2 + a_{m3}x_3 + \dots + a_{mn}x_n = b_m$ 

the **vector of constants** is the column vector of size m

$$\mathbf{b} = \begin{bmatrix} b_1 \\ b_2 \\ b_3 \\ \vdots \\ b_m \end{bmatrix}$$

©2005, 2006 Robert A. Beezer

## Definition SV Solution Vector

For a system of linear equations,

 $a_{11}x_1 + a_{12}x_2 + a_{13}x_3 + \dots + a_{1n}x_n = b_1$   $a_{21}x_1 + a_{22}x_2 + a_{23}x_3 + \dots + a_{2n}x_n = b_2$   $a_{31}x_1 + a_{32}x_2 + a_{33}x_3 + \dots + a_{3n}x_n = b_3$  $\vdots$ 

 $a_{m1}x_1 + a_{m2}x_2 + a_{m3}x_3 + \dots + a_{mn}x_n = b_m$ 

the **solution vector** is the column vector of size n

$$\mathbf{x} = \begin{bmatrix} x_1 \\ x_2 \\ x_3 \\ \vdots \\ x_n \end{bmatrix}$$

©2005, 2006 Robert A. Beezer

## Definition LSMR Matrix Representation of a Linear System

If A is the coefficient matrix of a system of linear equations and **b** is the vector of constants, then we will write  $\mathcal{LS}(A, \mathbf{b})$  as a shorthand expression for the system of linear equations, which we will refer to as the **matrix representation** of the linear system.

©2005, 2006 Robert A. Beezer

## Definition AM Augmented Matrix

Suppose we have a system of m equations in n variables, with coefficient matrix A and vector of constants **b**. Then the **augmented matrix** of the system of equations is the  $m \times (n + 1)$  matrix whose first n columns are the columns of A and whose last column (number n + 1) is the column vector **b**. This matrix will be written as  $[A \mid \mathbf{b}]$ .

©2005, 2006 Robert A. Beezer

## Definition RO Row Operations

The following three operations will transform an  $m \times n$  matrix into a different matrix of the same size, and each is known as a **row operation**.

- 1. Swap the locations of two rows.
- 2. Multiply each entry of a single row by a nonzero quantity.
- 3. Multiply each entry of one row by some quantity, and add these values to the entries in the same columns of a second row. Leave the first row the same after this operation, but replace the second row by the new values.

We will use a symbolic shorthand to describe these row operations:

- 1.  $R_i \leftrightarrow R_j$ : Swap the location of rows *i* and *j*.
- 2.  $\alpha R_i$ : Multiply row *i* by the nonzero scalar  $\alpha$ .
- 3.  $\alpha R_i + R_j$ : Multiply row *i* by the scalar  $\alpha$  and add to row *j*.

©2005, 2006 Robert A. Beezer

## Definition REM Row-Equivalent Matrices

Two matrices, A and B, are **row-equivalent** if one can be obtained from the other by a sequence of row operations.

#### $\mathbf{14}$

## Theorem REMES Row-Equivalent Matrices represent Equivalent Systems 15

Suppose that A and B are row-equivalent augmented matrices. Then the systems of linear equations that they represent are equivalent systems.

©2005, 2006 Robert A. Beezer

## Definition RREF Reduced Row-Echelon Form

A matrix is in **reduced row-echelon form** if it meets all of the following conditions:

- 1. A row where every entry is zero lies below any row that contains a nonzero entry.
- 2. The leftmost nonzero entry of a row is equal to 1.
- 3. The leftmost nonzero entry of a row is the only nonzero entry in its column.
- 4. Consider any two different leftmost nonzero entries, one located in row i, column j and the other located in row s, column t. If s > i, then t > j.

A row of only zero entries will be called a **zero row** and the leftmost nonzero entry of a nonzero row will be called a **leading 1**. The number of nonzero rows will be denoted by r. A column containing a leading 1 will be called a **pivot column**. The set of column indices for all of the pivot columns will be denoted by  $D = \{d_1, d_2, d_3, \ldots, d_r\}$  where  $d_1 < d_2 < d_3 < \cdots < d_r$ , while the columns that are not pivot columns will be denoted as  $F = \{f_1, f_2, f_3, \ldots, f_{n-r}\}$  where  $f_1 < f_2 < f_3 < \cdots < f_{n-r}$ .

#### Theorem REMEF Row-Equivalent Matrix in Echelon Form

Suppose A is a matrix. Then there is a matrix B so that

- 1. A and B are row-equivalent.
- 2. B is in reduced row-echelon form.

©2005, 2006 Robert A. Beezer

# Definition RR Row-Reducing

To **row-reduce** the matrix A means to apply row operations to A and arrive at a row-equivalent matrix B in reduced row-echelon form.

 $\textcircled{C}2005,\,2006$   $\,$  Robert A. Beezer

 $\mathbf{17}$ 

A system of linear equations is **consistent** if it has at least one solution. Otherwise, the system is called **inconsistent**.

©2005, 2006 Robert A. Beezer

## Definition IDV Independent and Dependent Variables

Suppose A is the augmented matrix of a consistent system of linear equations and B is a rowequivalent matrix in reduced row-echelon form. Suppose j is the index of a column of B that contains the leading 1 for some row (i.e. column j is a pivot column), and this column is not the last column. Then the variable  $x_j$  is **dependent**. A variable that is not dependent is called **independent** or **free**.

 $\mathbf{20}$ 

 $\textcircled{O}2005,\,2006$   $\,$  Robert A. Beezer

## Theorem RCLS Recognizing Consistency of a Linear System

Suppose A is the augmented matrix of a system of linear equations with m equations in n variables. Suppose also that B is a row-equivalent matrix in reduced row-echelon form with r rows that are not zero rows. Then the system of equations is inconsistent if and only if the leading 1 of row r is located in column n + 1 of B.

©2005, 2006 Robert A. Beezer

## ${\bf Theorem \ ISRN} \quad {\bf Inconsistent \ Systems,} \ r \ {\bf and} \ n$

Suppose A is the augmented matrix of a system of linear equations with m equations in n variables. Suppose also that B is a row-equivalent matrix in reduced row-echelon form with r rows that are not completely zeros. If r = n + 1, then the system of equations is inconsistent.

 $\textcircled{C}2005,\,2006$  Robert A. Beezer

 $\mathbf{21}$ 

 $\mathbf{22}$ 

Suppose A is the augmented matrix of a *consistent* system of linear equations with m equations in n variables. Suppose also that B is a row-equivalent matrix in reduced row-echelon form with r rows that are not zero rows. Then  $r \leq n$ . If r = n, then the system has a unique solution, and if r < n, then the system has infinitely many solutions.

©2005, 2006 Robert A. Beezer

## Theorem FVCS Free Variables for Consistent Systems

Suppose A is the augmented matrix of a *consistent* system of linear equations with m equations in n variables. Suppose also that B is a row-equivalent matrix in reduced row-echelon form with r rows that are not completely zeros. Then the solution set can be described with n - r free variables.

#### $\mathbf{24}$

## Theorem PSSLS Possible Solution Sets for Linear Systems

A system of linear equations has no solutions, a unique solution or infinitely many solutions.

©2005, 2006 Robert A. Beezer

# Theorem CMVEI Consistent, More Variables than Equations, Infinite solutions 26

Suppose a consistent system of linear equations has m equations in n variables. If n > m, then the system has infinitely many solutions.

## Definition HS Homogeneous System

A system of linear equations,  $\mathcal{LS}(A, \mathbf{b})$  is **homogeneous** if the vector of constants is the zero vector, in other words,  $\mathbf{b} = \mathbf{0}$ .

©2005, 2006 Robert A. Beezer

## Theorem HSC Homogeneous Systems are Consistent

Suppose that a system of linear equations is homogeneous. Then the system is consistent.

 $\mathbf{28}$ 

 $\textcircled{C}2005,\,2006$   $\,$  Robert A. Beezer

Definition TSHSE Trivial Solution to Homogeneous Systems of Equations 29

Suppose a homogeneous system of linear equations has n variables. The solution  $x_1 = 0$ ,  $x_2 = 0, \ldots, x_n = 0$  (i.e.  $\mathbf{x} = \mathbf{0}$ ) is called the **trivial solution**.

©2005, 2006 Robert A. Beezer

# Theorem HMVEI Homogeneous, More Variables than Equations, Infinite solutions 30

Suppose that a homogeneous system of linear equations has m equations and n variables with n > m. Then the system has infinitely many solutions.

 $\textcircled{C}2005,\,2006$   $\,$  Robert A. Beezer

## Definition NSM Null Space of a Matrix

The **null space** of a matrix A, denoted  $\mathcal{N}(A)$ , is the set of all the vectors that are solutions to the homogeneous system  $\mathcal{LS}(A, \mathbf{0})$ .

©2005, 2006 Robert A. Beezer

## Definition SQM Square Matrix

A matrix with m rows and n columns is square if m = n. In this case, we say the matrix has size n. To emphasize the situation when a matrix is not square, we will call it rectangular.

 $\mathbf{32}$ 

Suppose A is a square matrix. Suppose further that the solution set to the homogeneous linear system of equations  $\mathcal{LS}(A, \mathbf{0})$  is  $\{\mathbf{0}\}$ , i.e. the system has *only* the trivial solution. Then we say that A is a **nonsingular** matrix. Otherwise we say A is a **singular** matrix.

©2005, 2006 Robert A. Beezer

## Definition IM Identity Matrix

The  $m \times m$  identity matrix,  $I_m$ , is defined by

 $\left[I_m\right]_{ij} = \begin{cases} 1 & i = j \\ 0 & i \neq j \end{cases}$ 

33

 $\mathbf{34}$ 

 $\textcircled{O}2005,\,2006$   $\,$  Robert A. Beezer

Theorem NMRRI Nonsingular Matrices Row Reduce to the Identity matrix 35

Suppose that A is a square matrix and B is a row-equivalent matrix in reduced row-echelon form. Then A is nonsingular if and only if B is the identity matrix.

©2005, 2006 Robert A. Beezer

36

## Theorem NMTNS Nonsingular Matrices have Trivial Null Spaces

Suppose that A is a square matrix. Then A is nonsingular if and only if the null space of A,  $\mathcal{N}(A)$ , contains only the zero vector, i.e.  $\mathcal{N}(A) = \{\mathbf{0}\}$ .

## Theorem NMUS Nonsingular Matrices and Unique Solutions

Suppose that A is a square matrix. A is a nonsingular matrix if and only if the system  $\mathcal{LS}(A, \mathbf{b})$  has a unique solution for every choice of the constant vector **b**.

 $\textcircled{C}2005,\,2006$  Robert A. Beezer

## Theorem NME1 Nonsingular Matrix Equivalences, Round 1

Suppose that A is a square matrix. The following are equivalent.

- 1. A is nonsingular.
- 2. A row-reduces to the identity matrix.
- 3. The null space of A contains only the zero vector,  $\mathcal{N}(A) = \{\mathbf{0}\}.$
- 4. The linear system  $\mathcal{LS}(A, \mathbf{b})$  has a unique solution for every possible choice of  $\mathbf{b}$ .

38

©2005, 2006 Robert A. Beezer

# Definition VSCV Vector Space of Column Vectors

The vector space  $\mathbb{C}^m$  is the set of all column vectors (Definition CV) of size m with entries from the set of complex numbers,  $\mathbb{C}$ .

©2005, 2006 Robert A. Beezer

# Definition CVE Column Vector Equality

The vectors  $\mathbf{u}$  and  $\mathbf{v}$  are **equal**, written  $\mathbf{u} = \mathbf{v}$  provided that

 $\left[\mathbf{u}\right]_i = \left[\mathbf{v}\right]_i \qquad \qquad 1 \le i \le m$ 

### Definition CVA Column Vector Addition

Given the vectors  ${\bf u}$  and  ${\bf v}$  the sum of  ${\bf u}$  and  ${\bf v}$  is the vector  ${\bf u}+{\bf v}$  defined by

$$[\mathbf{u} + \mathbf{v}]_i = [\mathbf{u}]_i + [\mathbf{v}]_i \qquad 1 \le i \le m$$

©2005, 2006 Robert A. Beezer

### Definition CVSM Column Vector Scalar Multiplication

Given the vector **u** and the scalar  $\alpha \in \mathbb{C}$ , the scalar multiple of **u** by  $\alpha$ ,  $\alpha$ **u** is defined by

 $\left[\alpha \mathbf{u}\right]_{i} = \alpha \left[\mathbf{u}\right]_{i} \qquad 1 \le i \le m$ 

 $\textcircled{C}2005,\,2006$   $\,$  Robert A. Beezer

## Theorem VSPCV Vector Space Properties of Column Vectors

Suppose that  $\mathbb{C}^m$  is the set of column vectors of size m (Definition VSCV) with addition and scalar multiplication as defined in Definition CVA and Definition CVSM. Then

- ACC Additive Closure, Column Vectors If  $\mathbf{u}, \mathbf{v} \in \mathbb{C}^m$ , then  $\mathbf{u} + \mathbf{v} \in \mathbb{C}^m$ .
- SCC Scalar Closure, Column Vectors If  $\alpha \in \mathbb{C}$  and  $\mathbf{u} \in \mathbb{C}^m$ , then  $\alpha \mathbf{u} \in \mathbb{C}^m$ .
- CC Commutativity, Column Vectors If  $\mathbf{u}, \mathbf{v} \in \mathbb{C}^m$ , then  $\mathbf{u} + \mathbf{v} = \mathbf{v} + \mathbf{u}$ .
- AAC Additive Associativity, Column Vectors If  $\mathbf{u}, \mathbf{v}, \mathbf{w} \in \mathbb{C}^m$ , then  $\mathbf{u} + (\mathbf{v} + \mathbf{w}) = (\mathbf{u} + \mathbf{v}) + \mathbf{w}$ .
- ZC Zero Vector, Column Vectors There is a vector, 0, called the zero vector, such that  $\mathbf{u} + \mathbf{0} = \mathbf{u}$  for all  $\mathbf{u} \in \mathbb{C}^m$ .
- AIC Additive Inverses, Column Vectors If  $\mathbf{u} \in \mathbb{C}^m$ , then there exists a vector  $-\mathbf{u} \in \mathbb{C}^m$  so that  $\mathbf{u} + (-\mathbf{u}) = \mathbf{0}$ .
- SMAC Scalar Multiplication Associativity, Column Vectors If  $\alpha, \beta \in \mathbb{C}$  and  $\mathbf{u} \in \mathbb{C}^m$ , then  $\alpha(\beta \mathbf{u}) = (\alpha \beta) \mathbf{u}$ .
- DVAC Distributivity across Vector Addition, Column Vectors If  $\alpha \in \mathbb{C}$  and  $\mathbf{u}, \mathbf{v} \in \mathbb{C}^m$ , then  $\alpha(\mathbf{u} + \mathbf{v}) = \alpha \mathbf{u} + \alpha \mathbf{v}$ .
- DSAC Distributivity across Scalar Addition, Column Vectors If  $\alpha, \beta \in \mathbb{C}$  and  $\mathbf{u} \in \mathbb{C}^m$ , then  $(\alpha + \beta)\mathbf{u} = \alpha \mathbf{u} + \beta \mathbf{u}$ .

• OC One Column Vectors If  $\mathbf{u} \in \mathbb{C}^m$  then  $1\mathbf{u} = \mathbf{u}$ 

©2005, 2006 Robert A. Beezer

## Definition LCCV Linear Combination of Column Vectors

Given *n* vectors  $\mathbf{u}_1, \mathbf{u}_2, \mathbf{u}_3, \ldots, \mathbf{u}_n$  from  $\mathbb{C}^m$  and *n* scalars  $\alpha_1, \alpha_2, \alpha_3, \ldots, \alpha_n$ , their **linear** combination is the vector

 $\alpha_1\mathbf{u}_1 + \alpha_2\mathbf{u}_2 + \alpha_3\mathbf{u}_3 + \dots + \alpha_n\mathbf{u}_n.$ 

 $\mathbf{43}$ 

44

## Definition RLDCV Relation of Linear Dependence for Column Vectors

Given a set of vectors  $S = {\mathbf{u}_1, \mathbf{u}_2, \mathbf{u}_3, \dots, \mathbf{u}_n}$ , a true statement of the form

 $\alpha_1\mathbf{u}_1 + \alpha_2\mathbf{u}_2 + \alpha_3\mathbf{u}_3 + \dots + \alpha_n\mathbf{u}_n = \mathbf{0}$ 

is a relation of linear dependence on S. If this statement is formed in a trivial fashion, i.e.  $\alpha_i = 0, 1 \le i \le n$ , then we say it is the trivial relation of linear dependence on S.

©2005, 2006 Robert A. Beezer

## Definition LICV Linear Independence of Column Vectors

The set of vectors  $S = {\mathbf{u}_1, \mathbf{u}_2, \mathbf{u}_3, \dots, \mathbf{u}_n}$  is **linearly dependent** if there is a relation of linear dependence on S that is not trivial. In the case where the *only* relation of linear dependence on S is the trivial one, then S is a **linearly independent** set of vectors.

 $\mathbf{51}$ 

### Theorem LIVHS Linearly Independent Vectors and Homogeneous Systems 53

Suppose that A is an  $m \times n$  matrix and  $S = {\mathbf{A}_1, \mathbf{A}_2, \mathbf{A}_3, \ldots, \mathbf{A}_n}$  is the set of vectors in  $\mathbb{C}^m$  that are the columns of A. Then S is a linearly independent set if and only if the homogeneous system  $\mathcal{LS}(A, \mathbf{0})$  has a unique solution.

©2005, 2006 Robert A. Beezer

 $\mathbf{54}$ 

#### Theorem LIVRN Linearly Independent Vectors, r and n

Suppose that A is an  $m \times n$  matrix and  $S = \{\mathbf{A}_1, \mathbf{A}_2, \mathbf{A}_3, \dots, \mathbf{A}_n\}$  is the set of vectors in  $\mathbb{C}^m$  that are the columns of A. Let B be a matrix in reduced row-echelon form that is row-equivalent to A and let r denote the number of non-zero rows in B. Then S is linearly independent if and only if n = r.

## Theorem MVSLD More Vectors than Size implies Linear Dependence

Suppose that  $S = {\mathbf{u}_1, \mathbf{u}_2, \mathbf{u}_3, \dots, \mathbf{u}_n}$  is the set of vectors in  $\mathbb{C}^m$ , and that n > m. Then S is a linearly dependent set.

©2005, 2006 Robert A. Beezer

## Theorem NMLIC Nonsingular Matrices have Linearly Independent Columns 56

Suppose that A is a square matrix. Then A is nonsingular if and only if the columns of A form a linearly independent set.

#### Theorem NME2 Nonsingular Matrix Equivalences, Round 2

Suppose that A is a square matrix. The following are equivalent.

- 1. A is nonsingular.
- 2. A row-reduces to the identity matrix.
- 3. The null space of A contains only the zero vector,  $\mathcal{N}(A) = \{\mathbf{0}\}.$
- 4. The linear system  $\mathcal{LS}(A, \mathbf{b})$  has a unique solution for every possible choice of  $\mathbf{b}$ .
- 5. The columns of A form a linearly independent set.

©2005, 2006 Robert A. Beezer

#### Theorem BNS Basis for Null Spaces

Suppose that A is an  $m \times n$  matrix, and B is a row-equivalent matrix in reduced row-echelon form with r nonzero rows. Let  $D = \{d_1, d_2, d_3, \ldots, d_r\}$  and  $F = \{f_1, f_2, f_3, \ldots, f_{n-r}\}$  be the sets of column indices where B does and does not (respectively) have leading 1's. Construct the n - r vectors  $\mathbf{z}_j$ ,  $1 \le j \le n - r$  of size n as

$$\left[ \mathbf{z}_j \right]_i = \begin{cases} 1 & \text{if } i \in F, \ i = f_j \\ 0 & \text{if } i \in F, \ i \neq f_j \\ -\left[B\right]_{k,f_i} & \text{if } i \in D, \ i = d_k \end{cases}$$

Define the set  $S = \{\mathbf{z}_1, \mathbf{z}_2, \mathbf{z}_3, \dots, \mathbf{z}_{n-r}\}$ . Then

- 1.  $\mathcal{N}(A) = \langle S \rangle$ .
- 2. S is a linearly independent set.

## Definition LNS Left Null Space

Suppose A is an  $m \times n$  matrix. Then the **left null space** is defined as  $\mathcal{L}(A) = \mathcal{N}(A^t) \subseteq \mathbb{C}^m$ .

 $\mathbf{134}$ 

#### Definition EEF Extended Echelon Form

Suppose A is an  $m \times n$  matrix. Add m new columns to A that together equal an  $m \times m$  identity matrix to form an  $m \times (n+m)$  matrix M. Use row operations to bring M to reduced row-echelon form and call the result N. N is the **extended reduced row-echelon form** of A, and we will standardize on names for five submatrices (B, C, J, K, L) of N.

Let B denote the  $m \times n$  matrix formed from the first n columns of N and let J denote the  $m \times m$ matrix formed from the last m columns of N. Suppose that B has r nonzero rows. Further partition N by letting C denote the  $r \times n$  matrix formed from all of the non-zero rows of B. Let K be the  $r \times m$  matrix formed from the first r rows of J, while L will be the  $(m - r) \times m$ matrix formed from the bottom m - r rows of J. Pictorially,

$$M = [A|I_m] \xrightarrow{\text{RREF}} N = [B|J] = \begin{bmatrix} C & K \\ \hline 0 & L \end{bmatrix}$$

©2005, 2006 Robert A. Beezer

#### Theorem PEEF Properties of Extended Echelon Form

Suppose that A is an  $m \times n$  matrix and that N is its extended echelon form. Then

- 1. J is nonsingular.
- 2. B = JA.
- 3. If  $\mathbf{x} \in \mathbb{C}^n$  and  $\mathbf{y} \in \mathbb{C}^m$ , then  $A\mathbf{x} = \mathbf{y}$  if and only if  $B\mathbf{x} = J\mathbf{y}$ .
- 4. C is in reduced row-echelon form, has no zero rows and has r pivot columns.
- 5. L is in reduced row-echelon form, has no zero rows and has m r pivot columns.

#### ©2005, 2006 Robert A. Beezer

#### Theorem FS Four Subsets

Suppose A is an  $m \times n$  matrix with extended echelon form N. Suppose the reduced row-echelon form of A has r nonzero rows. Then C is the submatrix of N formed from the first r rows and the first n columns and L is the submatrix of N formed from the last m columns and the last m - r rows. Then

- 1. The null space of A is the null space of C,  $\mathcal{N}(A) = \mathcal{N}(C)$ .
- 2. The row space of A is the row space of C,  $\mathcal{R}(A) = \mathcal{R}(C)$ .
- 3. The column space of A is the null space of L,  $C(A) = \mathcal{N}(L)$ .
- 4. The left null space of A is the row space of L,  $\mathcal{L}(A) = \mathcal{R}(L)$ .

©2005, 2006 Robert A. Beezer

#### Definition VS Vector Space

Suppose that V is a set upon which we have defined two operations: (1) vector addition, which combines two elements of V and is denoted by "+", and (2) scalar multiplication, which combines a complex number with an element of V and is denoted by juxtaposition. Then V, along with the two operations, is a vector space if the following ten properties hold.

- AC Additive Closure If  $\mathbf{u}, \mathbf{v} \in V$ , then  $\mathbf{u} + \mathbf{v} \in V$ .
- SC Scalar Closure If  $\alpha \in \mathbb{C}$  and  $\mathbf{u} \in V$ , then  $\alpha \mathbf{u} \in V$ .
- C Commutativity If  $\mathbf{u}, \mathbf{v} \in V$ , then  $\mathbf{u} + \mathbf{v} = \mathbf{v} + \mathbf{u}$ .
- AA Additive Associativity If  $\mathbf{u}, \mathbf{v}, \mathbf{w} \in V$ , then  $\mathbf{u} + (\mathbf{v} + \mathbf{w}) = (\mathbf{u} + \mathbf{v}) + \mathbf{w}$ .
- Z Zero Vector There is a vector, 0, called the zero vector, such that  $\mathbf{u} + \mathbf{0} = \mathbf{u}$  for all  $\mathbf{u} \in V$ .
- AI Additive Inverses If  $\mathbf{u} \in V$ , then there exists a vector  $-\mathbf{u} \in V$  so that  $\mathbf{u} + (-\mathbf{u}) = \mathbf{0}$ .
- SMA Scalar Multiplication Associativity If  $\alpha, \beta \in \mathbb{C}$  and  $\mathbf{u} \in V$ , then  $\alpha(\beta \mathbf{u}) = (\alpha \beta) \mathbf{u}$ .
- DVA Distributivity across Vector Addition If  $\alpha \in \mathbb{C}$  and  $\mathbf{u}, \mathbf{v} \in V$ , then  $\alpha(\mathbf{u} + \mathbf{v}) = \alpha \mathbf{u} + \alpha \mathbf{v}$ .
- DSA Distributivity across Scalar Addition If  $\alpha, \beta \in \mathbb{C}$  and  $\mathbf{u} \in V$ , then  $(\alpha + \beta)\mathbf{u} = \alpha \mathbf{u} + \beta \mathbf{u}$ .

• O One If  $\mathbf{u} \in V$  then  $1\mathbf{u} - \mathbf{u}$ 

The objects in V are called **vectors**, no matter what else they might really be, simply by virtue

Suppose  $T: U \mapsto V$  is a linear transformation. Then T is invertible if and only if T is injective and surjective.

#### Theorem CIVLT Composition of Invertible Linear Transformations

Suppose that  $T: U \mapsto V$  and  $S: V \mapsto W$  are invertible linear transformations. Then the composition,  $(S \circ T): U \mapsto W$  is an invertible linear transformation.

©2005, 2006 Robert A. Beezer

## Theorem ICLT Inverse of a Composition of Linear Transformations 272

Suppose that  $T: U \mapsto V$  and  $S: V \mapsto W$  are invertible linear transformations. Then  $S \circ T$  is invertible and  $(S \circ T)^{-1} = T^{-1} \circ S^{-1}$ .

Two vector spaces U and V are **isomorphic** if there exists an invertible linear transformation T with domain U and codomain  $V, T: U \mapsto V$ . In this case, we write  $U \cong V$ , and the linear transformation T is known as an **isomorphism** between U and V.

©2005, 2006 Robert A. Beezer

#### Theorem IVSED Isomorphic Vector Spaces have Equal Dimension

Suppose U and V are isomorphic vector spaces. Then  $\dim(U) = \dim(V)$ .

274

Definition ROLT Rank Of a Linear Transformation

Suppose that  $T: U \mapsto V$  is a linear transformation. Then the **rank** of T, r(T), is the dimension of the range of T,

 $r(T) = \dim\left(\mathcal{R}(T)\right)$ 

©2005, 2006 Robert A. Beezer

#### Definition NOLT Nullity Of a Linear Transformation

Suppose that  $T: U \mapsto V$  is a linear transformation. Then the **nullity** of T, n(T), is the dimension of the kernel of T,

 $n(T) = \dim\left(\mathcal{K}(T)\right)$ 

 $\textcircled{C}2005,\,2006$   $\,$  Robert A. Beezer

#### $\mathbf{276}$

### Theorem ROSLT Rank Of a Surjective Linear Transformation

Suppose that  $T: U \mapsto V$  is a linear transformation. Then the rank of T is the dimension of V,  $r(T) = \dim(V)$ , if and only if T is surjective.

©2005, 2006 Robert A. Beezer

#### Theorem NOILT Nullity Of an Injective Linear Transformation

Suppose that  $T: U \mapsto V$  is an injective linear transformation. Then the nullity of T is zero, n(T) = 0, if and only if T is injective.

 $\mathbf{278}$ 

#### Theorem RPNDD Rank Plus Nullity is Domain Dimension

Suppose that  $T: U \mapsto V$  is a linear transformation. Then

 $r(T) + n(T) = \dim(U)$ 

©2005, 2006 Robert A. Beezer

#### Definition VR Vector Representation

Suppose that V is a vector space with a basis  $B = {\mathbf{v}_1, \mathbf{v}_2, \mathbf{v}_3, \dots, \mathbf{v}_n}$ . Define a function  $\rho_B: V \mapsto \mathbb{C}^n$  as follows. For  $\mathbf{w} \in V$ , find scalars  $a_1, a_2, a_3, \dots, a_n$  so that

$$\mathbf{w} = a_1 \mathbf{v}_1 + a_2 \mathbf{v}_2 + a_3 \mathbf{v}_3 + \dots + a_n \mathbf{v}_n$$

then

$$\left[\rho_B\left(\mathbf{w}\right)\right]_i = a_i \qquad \qquad 1 \le i \le n$$

 $\textcircled{C}2005,\,2006$   $\,$  Robert A. Beezer

## $\mathbf{280}$

The function  $\rho_B$  (Definition VR) is a linear transformation.
